Annual Review for Alexis Kanevsky

Employee	Manager	Review Template	Review Archive By	Period
Alexis Kanevsky	Daniel Dakic	Review Form - Staff	1/31/2027	1/31/2026 - 1/31/2027

Review Template Description

The competencies included in this review apply to individual contributors.

Instructions	0%

Competencies	20%
CARE	100%

Goals	80%
Architecture Strategic Transformation and R&D	25%
People and Development: Becoming a Reliable, Scalable Lead with High-Impact, Audience-Aware Communication	40%
AI-Driven Automation (Alex)	10%
Commercial & iCompass Strategy	15%
Learning & Training	10%

General Notes

Instructions

0%

Welcome to the review form! This form is used to track progress and achievements related to competencies and goals throughout the year and is the basis of our annual review. The form consists of three main sections - Competencies, Goals and General Notes. You can scroll through the form to view and work with each section or jump to a section quickly by clicking on it in the menu on the left.

Competencies

20%

Use this section to add achievements and other notes related to our competencies throughout the year. This information can be referenced to help guide and support the employee's competency ratings during the annual review.

CARE

100%

CARE reflects the core values and key behaviors that are essential for fostering a positive and productive work environment. Employees are expected to demonstrate Caring, Availability, Reliability, and Ease of working with others in their daily interactions. The descriptions provided for each rating below are intended to serve as examples only to help inform the rating process. It is important to use specific examples and evidence that support the rating, ensuring a fair and accurate assessment of each employee's performance. Other examples can also be valid, as long as they effectively demonstrate the core values and key behaviors.

Unsatisfactory	Needs Improvement	Successfully Meets Expect...	Exceeds Expectations	Exceptional

Goals

80%

Use this section to add performance and professional development goals to the review and track progress by adding notes and measurements. Be sure to use the S.M.A.R.T. goals guidelines by creating goals that are specific, measurable, achievable, relevant, and time-bound.

For help on how to add goals and measurements, click the links below:

- How to add a goal to your own review
- How to add a goal to your employee's review (for managers)
- How to add a measurement to track your progress

To set goals for the NEXT review period, follow the instructions below:

- How to set goals for a future review

Architecture Strategic Transformation and R&D

25%

Support strategic objective to transform Architecture into a strategic enterprise enabler (CARE@Scale) that drives competitiveness and technical excellence. Focus on modernizing architecture processes, applying Apply AI-driven automation, strengthening governance, and advancing technical R&D to enable scale, support new business lines, and improve delivery velocity.

- Modernize architecture processes
- Apply AI-driven automation
- Strengthen governance
- Advance technical R&D
- Improve delivery velocity and scalability
- Set strategic direction across all three pillars
- Ensure cross-pillar coordination
- Remove barriers for others

- **Task 1: Architecture Process Modernization & Governance**
  - **Time-bound:** Q3 2026
  - **Meets Expectations**
    - Publish fully restructured Architecture Confluence Space
    - Improve and automate API Governance workflows
      - Solution design generation
      - API standards Q&A
      - ADR summarization
      - Threat-model prompts
      - Delivery-assurance guidance
    - Reduce architecture review turnaround time
    - Finalize and publish at least 5 core standards in addition to guidelines and best practices
    - Under the Architecture Community of Practice (CoP) hold sessions focused on standards literacy, AI adoption, and cross-team collaboration
  - **Exceeds Expectations**
    - Further advance standards, architecture artifacts and Delivery Assurance enhancements
    - Publish more than 5 core standards and socialize those as part of the CoP
    - Ensure CoP sessions produce actionable improvements (e.g., updated standards, clarified patterns)
    - Reduce architecture review turnaround time by >20%
- **Task 2: Technical R&D for Scaling & New Business Lines**
  - **Time-bound:** Q4 2026
  - **Meets Expectation**
    - Lead R&D efforts in Airline Expansion, Quote Engine POC, and Credit Card expansion.
  - Implement GenAI development capabilities
  - **Exceeds Expectations**

- Identify and implement additional R&D opportunities

Unsatisfactory	Needs Improvement	Successfully Meets Expect...	Exceeds Expectations	Exceptional

Measurements

Task 1: Architecture Process Modernization & Governance (25%)

- **Task 1: Architecture Process Modernization & Governance**
  - **Time-bound:** Q2 2026
  - **Meets Expectations**
    - Publish fully restructured Architecture Confluence Space
    - Improve and automate API Governance workflows
      - Solution design generation
      - API standards Q&A
      - ADR summarization
      - Threat-model prompts
      - Delivery-assurance guidance
    - Reduce architecture review turnaround time
    - Finalize and publish at least 5 core standards in addition to guidelines and best practices
    - Under the Architecture Community of Practice (CoP) hold sessions focused on standards literacy, AI adoption, and cross-team collaboration

People and Development: Becoming a Reliable, Scalable Lead with High-Impact, Audience-Aware Communication

Alex consistently operates at a Lead Architect level by independently managing multiple parallel workstreams, owning end-to-end architecture decisions, and communicating with concise, audience-appropriate clarity that reduces escalations, rework, and alignment cycles. Success will be demonstrated through predictable multi-workstream progress, concise and structured communication, reduced need for day-to-day guidance, and consistent delivery of clear, actionable outputs that minimize escalations and rework.

Success Criteria:
This goal is achieved when Alex consistently:

- Manage multiple workstreams with visible planning and steady progress
- Surface risks early and minimize revision loops
- Lead initiatives end-to-end with leadership reviewing outputs, not process
- Provide concise executive summaries (3–5 bullets) after major meetings
- Tailor depth of communication to technical vs. business audiences
- Paraphrase and confirm understanding before responding
- Deliver information confidently with reduced filler and improved structure
- Document progress via 4+ role-plays and 3+ stakeholder feedback entries
- Maintain a weekly work-planning routine (Kanban or time-blocking)
- Apply *practical-vs-possible* judgment and avoid off-topic deep dives
- Focus: Literal & Figurative. What did I finish before starting something else?

Measurement Approach:
Focus on operational maturity and communication impact, not effort.
Acceptable quarterly evidence includes:

- Weekly or bi-weekly priority lists showing parallel progress
- Status updates demonstrating early risk identification and fewer rework cycles
- Meeting notes with recommendations, options, and decision framing
- 3–5 bullet executive summaries
- Role-play learnings (4 total for the year)
- 3+ stakeholder feedback entries

Q2 Task: Foundation: Prioritization, Discipline & Reduction of Deep Dives

- **Outcomes:**
  - Predictable work progress, concise communication, early reduction in escalations.
  - Requires less day-to-day guidance, shifting toward scheduled check-ins.
- **Meets Criteria:**
  - Visible prioritization, parallel progress, structured check-ins, role-play learnings, early use of What/Why/Impact, weekly planning routine.
  - Applies *practical-vs-possible* judgment and avoid off-topic deep dives
  - Focuses: Literal & Figurative. What did I finish before starting something else?

Q3 Task: Independent Parallel Execution & Confident Delivery

- **Outcomes:**
  - Work progresses independently, communication is structured and confident, decisions handled with minimal escalation.
- **Meets Criteria:**
  - Independent milestone ownership, early risk surfacing, fewer revision loops, decision-focused meeting notes, consistent executive summaries, stakeholder feedback, continued role-play learnings.
  - Applies *practical-vs-possible* judgment and avoid off-topic deep dives
  - Focuses: Literal & Figurative. What did I finish before starting something else?

Q4 Task: Scalable Lead Ownership & High-Impact Communication Leadership

- **Outcomes:**
  - Leadership oversight reduced, Alex becomes a go-to clarity provider, architecture outputs are correct-first-time, full Lead Architect independence demonstrated.
- **Meets Criteria:**

- Stakeholders go directly to Alex for clarity, decisions executed without escalation, team follows Alex's direction, communication reduces confusion/rework, final role-play learnings and feedback logs.
- Applies *practical-vs-possible* judgment and avoid off-topic deep dives
- Focuses: Literal & Figurative. What did I finish before starting something else?

AI-Driven Automation (Alex) 10%

Implement AI-driven automation within the Architecture function by delivering key AI capabilities that reduce manual effort, improve consistency, and accelerate the creation of architecture artifacts.

Time-bound: Q3 2026

- **Meets Expectations**
  - Deliver ARCHI MVP
  - Enable 5 AI use cases (solution design generation, API standards Q&A, ADR summarization, threat-model prompts, delivery-assurance guidance)
  - Achieve 25% reduction in time spent producing architecture artifacts
- **Exceeds Expectations**
  - Expand ARCHI beyond 5 use cases
  - Achieve >35% reduction in time spent producing architecture artifacts

Unsatisfactory	Needs Improvement	Successfully Meets Expect...	Exceeds Expectations	Exceptional

Commercial & iCompass Strategy 15%

Provide end-to-end enterprise-level architecture leadership across the company's 2026 commercial growth agenda and iCompass platform evolution. This includes enabling commercial expansion (eSIM, parametric pricing, partner enablement), modernizing eCommerce platforms (AEM, Credential Provider, eClaims, Agentic AI), and delivering high-quality architectural ownership for all iCompass satellites, Conversational AI, KL Migration to ALT, IPS, Genesys, and Partner Migration & Testing.
The goal is to strengthen scalability, partner experience, customer experience, and readiness for R1/R2 cycles while ensuring all work aligns to enterprise standards, reduces complexity, and accelerates delivery.

Time-bound: Q4 2026

- **Meets Expectations**
  - Deliver complete, actionable architectural guidance for eSIM, Parametric Pricing, AEM modernization, eClaims, and Credential Provider.
  - Produce timely solution architectures, integration patterns, and readiness assessments for all commercial and eCommerce workstreams.
  - Support eCommerce modernization to ensure deliverables align with enterprise architecture, meeting operational, performance, and compliance standards.
  - Support the development and integration of Agentic AI for eCommerce journeys.
  - Collaborate with commercial, product, engineering, and partner teams to ensure requirements are clear, feasible, and aligned to enterprise patterns and constraints.
  - Support the Conversational AI, KL Migration to ALT, IPS, Genesys, and Partner Migration & Testing.
  - Provide clear, actionable integration patterns, ADRs, data-migration mappings, and automation guidance for iCompass satellites.
  - Support R1 and R2 cycles, including partner-testing readiness, defect analysis, and remediation reviews.
  - Ensure all satellite and partner migrations align with enterprise standards and account for downstream ecosystem impacts.
  - Anticipate key dependencies (partner certification, data methods, cutover timing) and raise risks early.
  - Propose and influence strategic modernization or innovation opportunities that materially improve:
    - Jumbo-account retention
    - Partner activation speed
    - Customer experience
- **Exceeds Expectations**
  - Identify and drive opportunities to streamline commercial technical processes (e.g., architecture simplification, partner onboarding acceleration) leading to meaningful improvements in partner experience.
  - Establish reusable playbooks, templates, and patterns that strengthen commercial and eCommerce readiness across all teams.

- Anticipate emerging commercial demands, market shifts, partner platform upgrades, and regulatory impacts, aligning architecture proactively ahead of requests.
- Establish AI-driven validation framework that materially reduces product configuration testing cycles.
